

HIGH CLASS AESTHETICS AND HIGH STANDARD QUALITY

CUSTOMIZABLE
More flexible customization services, providing designers with a full range of matching services.

100%

100% IMPORTED FROM ITALY
Better Italian imported dry granular after polishing.

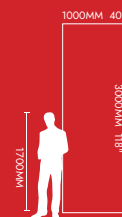

MORE NATURAL
More artistic composition of natural art and decorative space art.

LIGHTER AND GRACEFUL
6mm thick is 15KG/m², 9mm thick is 22KG/m², 12mm thick is 30KG/m²

SINTERED STONE, WITH ITS EXCELLENT PHYSICAL PROPERTIES, HAS BECOME A NEW STAR OF ENVIRONMENTAL PROTECTION MATERIALS.

HIGH HARDNESS, IMPACT RESISTANCE, STRONG WEAR RESISTANCE, EASY TO CLEAN

Sintered Stone produced by high temperature and high pressure has a Mohs hardness of more than 6, and its scratch resistance and wear resistance can be directly tested with a steel knife for scratches. It is well to known and widely used for kitchen countertop because it is scratch-resistant and difficult for ordinary knives to damage the surface, also it is resistant to any type of chemical detergent.

HIGH TEMPERATURE RESISTANCE, ANTI-PENETRATION, ACID AND ALKALI CORROSION RESISTANCE, UV PROTECTION

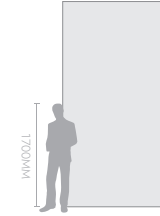

The fire resistant coefficiency of Sintered Stone reaches A1 level of non-combustibility, the safety is high, the water absorption rate is low as 0.005%; the product doesn't deform and fade, and it is hardly affected by changes of outside temperature.

100% NATURAL AND RECYCLABLE MATERIALS

Sintered stone saves more than 60% of raw material resources, reduce more than 50% comprehensive energy consumption and more than 80% exhaust emissions. So it is non-oxicand non-radiation, NSF certified, and can be in direct contact with food.

EASY TO CUT AND INSTALL, ANTI-BENDING

It is easy to cut into different size and recombine into different paving forms, which can save more labor costs and time. There are various paving construction methods, which can effectively shorten the construction period.
